Full-stack engineer with 4+ years building payment ledgers, real-time and geospatial systems, and owning DevOps end-to-end. Former bootcamp instructor.

EXPERIENCE

Full-Stack & DevOps Engineer August 2024 – September 2026
Confidential (fintech platform) *Türkiye, Qatar*

- Built backend APIs (Express, Fastify, FastAPI, Prisma, Kysely) on PostgreSQL & MongoDB, scaling a platform to thousands of active users.
- Delivered real-time features (WebSockets, Redis) and engineered the core payment engine, featuring a fully auditable balance ledger to securely manage transactions and user funds.
- Built user-facing, back-office and admin web apps (Next.js, React, Tailwind, TanStack) with a polished, mobile-like UX.
- Used Playwright extensively for internal workflow automation and data scraping tools, extending its use into QA testing across the platform's web apps to improve coverage.
- Automated background jobs (BullMQ) and secured systems with JWT and Zitadel SSO.
- Implemented full observability (Grafana, OpenTelemetry) across all services, improving incident detection and prevention.
- Automated deployments and secrets management (Docker, Ansible, GitLab CI, HashiCorp Vault) across multiple VPS instances.
- Used AI coding assistants daily for scaffolding, refactoring and first-pass code reviews.

Full-Stack Engineer December 2023 – August 2024
Sahla Solutions *Algeria*

- Built backend services for a ride-hailing platform spanning five apps (rider, driver, back-office, driver support, customer support), supporting a base of 25k drivers.
- Engineered rider-driver matching and live position tracking with Redis Geo, Mapbox and Google Maps, covering geospatial search, routing and ETAs.
- Scaled real-time services (Socket.IO, Redis pub/sub) across distributed servers, keeping ride state and driver locations in sync.
- Developed payment management for local digital payments and driver-confirmed cash rides, covering commissions, driver balances and reconciliation.
- Implemented regulatory compliance, including data-retention policies, driver verification workflows and payment record-keeping, to meet local transport and data-protection requirements.
- Designed an event-driven architecture delivering multi-channel notifications reliably and decoupling services as the platform grew.
- Implemented a double-entry ledger as the financial source of truth, giving every ride, commission and payout a balanced, auditable record.
- Set up logging and observability across the whole stack, and built internal web tools (ledger viewer, queue inspector, mock driver simulator) that helped the dev team debug production issues and test faster.

Freelance Software Developer April 2023 – December 2023
Self-Employed *Algeria*

- Delivered APIs, business websites, and full-stack apps for local and international clients.
- Built the Nusuk.sa website (Next.js, Express) and an Electron-based touchscreen kiosk app for live events.
- Built the frontend for META-Z, a Web3 metaverse game, integrating MetaMask and Web3.js.

Full-Stack Web Development Instructor April 2023 – December 2023
Code213 *Algeria*

- Delivered a comprehensive 6-month MERN stack curriculum (HTML, CSS, JavaScript, React, Node.js, MongoDB) to three distinct student cohorts.
- Guided students through end-to-end capstone projects, ensuring technical readiness for school-arranged internships.

Full-Stack Web Development Instructor September 2022 – April 2023
Gomycode *Algeria*

- Taught in-person courses in Python fundamentals and full-stack web development (HTML, CSS, JavaScript, React, Node.js, MongoDB).
- Mentored students through capstone projects, preparing them for school-arranged internships.

EDUCATION

Master's in Computer Science (Computer Vision / Machine Learning)
University of Science and Technology Houari Boumediene (USTHB)

Bachelor's in Computer Science
University of Science and Technology Houari Boumediene (USTHB)

SKILLS

Programming Languages: TypeScript, JavaScript, Python, Java, Bash

Backend: Node.js, Express, Fastify, NestJS, FastAPI, Socket.IO, WebSockets

Frontend: React, Next.js, TanStack, Tailwind CSS, HTML, CSS, D3.js, Phaser.js, Electron

Testing & Automation: Vitest, Jest, Playwright, BeautifulSoup

Data & Messaging: PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ, BullMQ, Prisma, Kysely

DevOps & Infra: Git, Docker, Ansible, GitLab CI, AWS, Cloudflare, Linux, Nginx, HashiCorp Vault, OpenBao, Grafana, Prometheus, Loki, OpenTelemetry, Zitadel

Spoken Languages: English (Certified IELTS C1), French (Certified DALF C1), Arabic (Native)
